

ABOUT US

High-Tech Security has been a trusted name in technology for the past 3 decades. We are based in Los Angeles, CA and have evolved from a computer repair store into an overall technology solution center. We offer various services and can accommodate our client needs. Some of the most popular services include Security Cameras, Access Control, Intrusion Alarms, Panic Buttons, Wireless Access Points, Phone Entry Systems, Structured Cabling and Networking needs.

We understand that security is important to you and could be a life or death matter. At the very least, the lack of security could be a huge liability. Therefore, we take our job very seriously and understand that each client has his own challenges. No two jobs are the same and we customize the right solution for all unique needs.

When choosing your low voltage contractor, keep in mind that two companies can install the same equipment but the systems can perform and look entirely different. We constantly train our team to keep up to date with the latest technology so we can maximize the performance and qualities of all our installations.

The owner, staff and technicians keep updated with constant training, striving to improve our technical department focusing on quality, research and attention to detail. We have a team dedicated to meeting your needs and we will provide the highest quality service in the industry.

We are open to new and creative solutions and pride ourselves in workmanship, quality and customer service. We separate ourselves from other companies by assigning a project manager to almost every installation so our clients do not feel disrupted and can rather focus on their daily tasks. Our staff will constantly be in communication with our clients. We fulfill our commitment to high ethical and moral business standards, by creating an environment of trust and partnership with both our customers and employees. From Residential to Commercial and Industrial properties, our commitment will be the same. We appreciate your support.

CCTV / SECURITY CAMERAS

We specialize in CCTV / Security Cameras While we manage to keep the quality of our cameras consistent, they do vary in name brands, designs, and budgets. You will always have a team dedicated to accommodate your needs.

We offer the latest technology in CCTV; from facial recognition, license plate readers to various AI technology integrated into your CCTV system. We also offer self-learning video analytics for preventative protection and quicker video searches.

High-Tech Security is committed to offering you the best design. We can also integrate access control with your camera system. This can help you view and manage your security cameras, as well as the doors, from one screen i.e., someone opens a door; the camera near that door will dominate the screen.

Please give us a call at **(877) CCTV-BUY** or submit a request online to receive a Free Estimate.

STRUCTURED CABLING

Pulling wire from point A to point B is one thing. Ensuring the final installation is professional, neat, organized, correct, and easy to service in the future, is quite another. A professional cabling installation helps ensure reliability of all the systems and technologies it supports. Our experienced technicians install, document, and test all cabling so you can be sure your low-voltage infrastructure is organized, reliable, and future-proof.

LOW VOLTAGE

Low Voltage is used for smaller devices like computers, phones, patch panels, wireless access points, access control, servers and CCTV equipment.

ACCESS CONTROL

Managing entry points such as doors and gates for your business or property not only adds property value but it is also convenient and could be life-saving. It means peace of mind and security for all. You can have control of your property even when you are away and generate reports from a remote location. You will decide who goes in and out during which specific hours and you can assign different permissions to those with special roles. Software is user-friendly and access control systems will perform identification and access approval per individual. Options vary from card readers, keypads and biometric readers.

TO PROPERTY MANAGERS

We work closely with property managers and portfolio supervisors. We will keep your site managers up to date on the progress of all projects and we also train site managers on the equipment we install. Client satisfaction is of utmost importance to us and we pride ourselves in exceeding our client's expectations with the stellar workmanship we provide. It is an honor and a privilege when you refer our company to your clients and we will be sure to provide your clients with the same level of service excellence. We will be certain to represent your property management company at the highest level.
